

# NarrAUTOr

Celine Cheng, Indu Korambath, Effie Landau

# Application Area

- Unlike audio books, physical books are not easy to use hands-free, but are still what we all use most
- Project: Build a hands-free device that will read physical books aloud for user

# Example Use Cases

- People looking to multitask
  - Students doing assignments and using physical textbook
  - Cooking with recipe book
- For those who are visually / physically impaired
- For children who cannot read yet
- Everybody has books!

# Previous Work

- Voice-automated page reader
  - <https://www.youtube.com/watch?v=OBqZgKLyn60>
- BrickPi reader
  - <https://www.youtube.com/watch?v=TDYRHIGLAuM>

# Previous Work: Page Turning

- Turn pages by hand and take pictures
  - <https://youtu.be/tE7U-2z5py4?t=2m24s>
- Lego NXT page turner
  - <https://www.youtube.com/watch?v=b4vtJnKFtM8>
- Vacuum page turner
  - <https://www.youtube.com/watch?v=0d21XOV4NPE>
- Pegs on a belt page turner
  - <https://www.youtube.com/watch?v=oeZaoGRgdkl>
- High-speed page scanner
  - <https://www.youtube.com/watch?v=03ccxwNssmo>
- Fan page turner
  - <https://www.youtube.com/watch?v=1eKYomglySQ>
- Lift scanner
  - <https://youtu.be/hlOQuuLYavY?t=55s>

# Proposed Solution

- Page turning mechanism
- Stand to hold camera for camera and lights to take picture of book page
- Image-to-Text & Text-to-Speech processing
- Read book page out loud through speaker
- Microphone to control speed, operation

# How will it work?

For this book reading device we propose the following strategy:

A stand would hold several servos/motors/actuators that together controlled by a Raspberry Pi would comprise a page-turning mechanism for the physical book. There would be a speaker attached to our device, through which the pi will play back the text in audio format

Stretch Goal: In addition there would be a microphone and speaker through which one can voice operate the device

# Input Constraints

## Input

1. Only hardback textbooks/binders will be used
2. Subject should optimally lie flat when open
3. Not doing title pages or figures (images) as of now

## Book Turning System

Page lifted  
by wheel/  
friction  
utilizing  
mechanism

Page  
flipped by  
lever/  
rotating  
pegs

Camera  
snaps  
photo of  
new pages

## Computer Vision

### Image Processing

Noise Removal

Foreground/background  
separation

Zone Segmentation

Normalization/ Binarization

Character Segmentation

Feature Extraction

Classification

## Audio Output

Speaker outputs  
audio!

Input text file  
to  
text-to-speech  
code

# Page Scan and Text-to-Speech

- Standard image pre-processing
- Page recognition
- Text segmentation/ignoring images
- Optical Character Recognition Library
- Text-to-Speech API
  - SpeechSynthesis API
    - Ex. <https://codepen.io/SteveJRobertson/pen/emGWaR>
    - <https://github.com/AurelioDeRosa/HTML5-API-demos/blob/master/demos/speech-synthesis-api-demo.html>

# ToolBox: Parts, Hardware, Software, etc.

- ArduCam (8MP)
- Speaker
- ArduCam CSI to HDMI extension cable
- Pi Cobbler (to extend pin access to breadboard)
- Microphone
- Servos
- Motor/Chain
- Raspberry Pi w/ Linux
- Solidworks/Lasercutting
- OpenCV, Tesseract

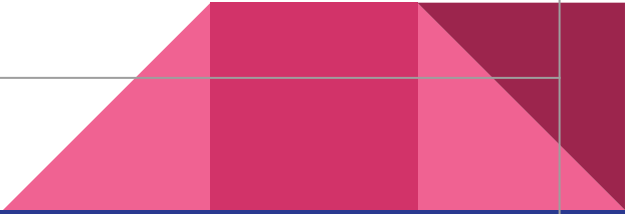

Home / Arducam CSI to HDMI Cable Extension Module with

# Project Requirements

Stand Design	<ul style="list-style-type: none"><li>● Adjustable camera support arm</li><li>● Support use of hardcover books of a variety of sizes</li><li>● Must be easy for user to swap books</li><li>● Ensure book pages lie flat after turning</li></ul>
Page Flipping	<ul style="list-style-type: none"><li>● Gentle enough motion to prevent page rips</li><li>● Flip pages forwards and backwards</li><li>● Wait until done reading page to flip page</li></ul>
Image Processing and Image to Text	<ul style="list-style-type: none"><li>● Properly segment images and text</li><li>● Handle a variety of fonts and text sizes</li><li>● Transcribes text in correct reading order</li></ul>
Text to Speech	<ul style="list-style-type: none"><li>● Provide volume control</li><li>● Provide speech speed/accent control</li></ul>

# Testing Metrics

Stand Design	<ul style="list-style-type: none"><li>● Enable use of books of up to 12 inches in height, 8 inches in width, and 3 inches in thickness</li></ul>
Page Flipping	<ul style="list-style-type: none"><li>● Limit multiple page flip incidences to 1 in 20 page flips</li><li>● Flip page in under 5 seconds</li></ul>
Image Processing	<ul style="list-style-type: none"><li>● Correctly process text at ~95% accuracy at minimum</li><li>● No lags in audio after processing first set of pages</li></ul>
Text to Speech	<ul style="list-style-type: none"><li>● Limit lag time between taking first photo and initial output of audio to ~1-2 minutes</li></ul>

# Tentative Project Timeline

# Risk Factors

- In page separation, if using wheel, it can start to move off
  - Secure page separation part, such as bar preventing outside movement
- Ripping page during page turn
  - We believe peg solution is gentlest method
- Accuracy will definitely not be perfect
  - Will it be enough that people can understand?

THANK YOU
