

Falcon: the Pro Gym Assistant

Team Ao

Vishal Baskar

Albert Chen

Venkata Vivek Thallam

Use Case

- Advanced at-home workout system that provides:
 - Demonstration of exercises
 - Rep counter
 - Calorie estimator
 - Live stream of themselves
 - Ability to get customized workouts that comprise of the following:
 - Leg Raises, Pushups, Lunges
 - Real-time feedback regarding posture (**Unique to Falcon**)
- Workout system involves a display and a side camera
- Processing done on an FPGA to address privacy concerns
- Areas Covered:
 - Software Systems, Signals and Systems, Hardware Systems

Mirror: A popular at-home workout tool

Materials/Components

- Materials:
 - Dark Suit + 3M Colored Bandages
 - Xilinx Kintex-7 FPGA KC705
 - Logitech C270 WebCam
- Components:
 - UART Interface
 - Joint Tracking Algorithm
 - Vivado HLS
 - Posture Analysis Algorithm
 - PyGame, OpenCV, SQLite

Solution Approach

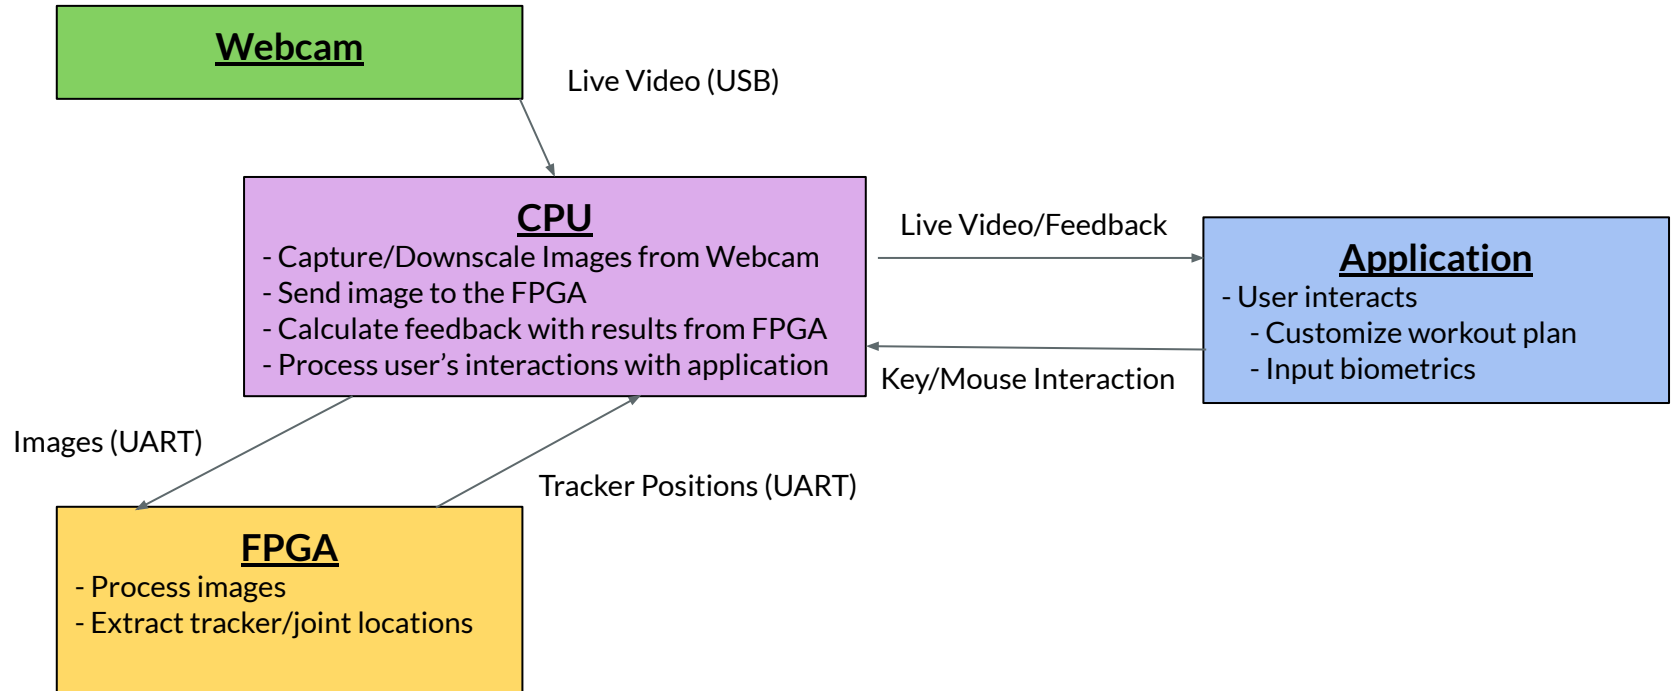

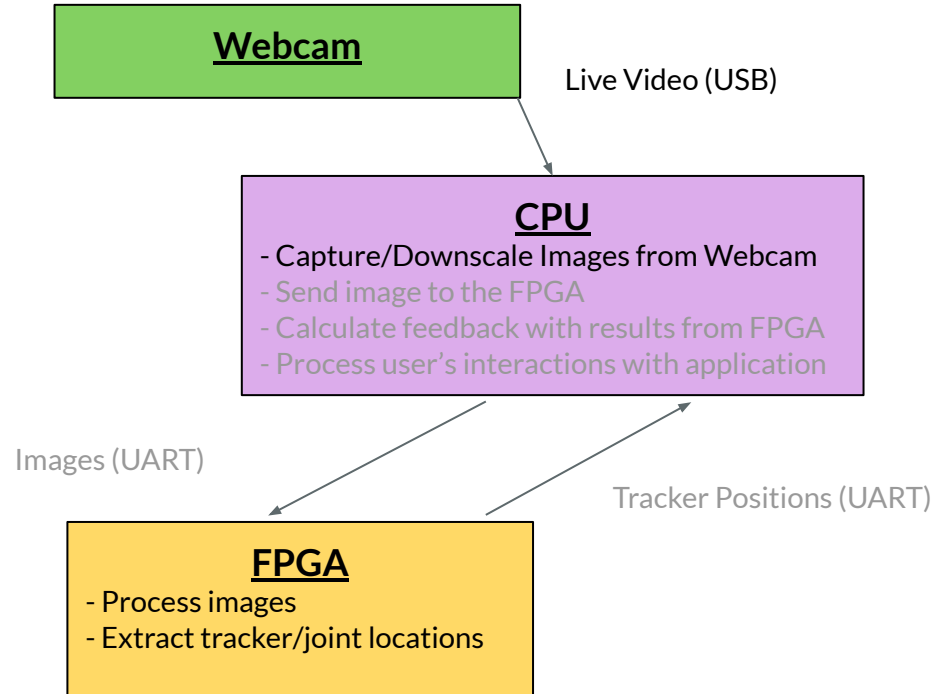

Image Processing

Pre-Processing:

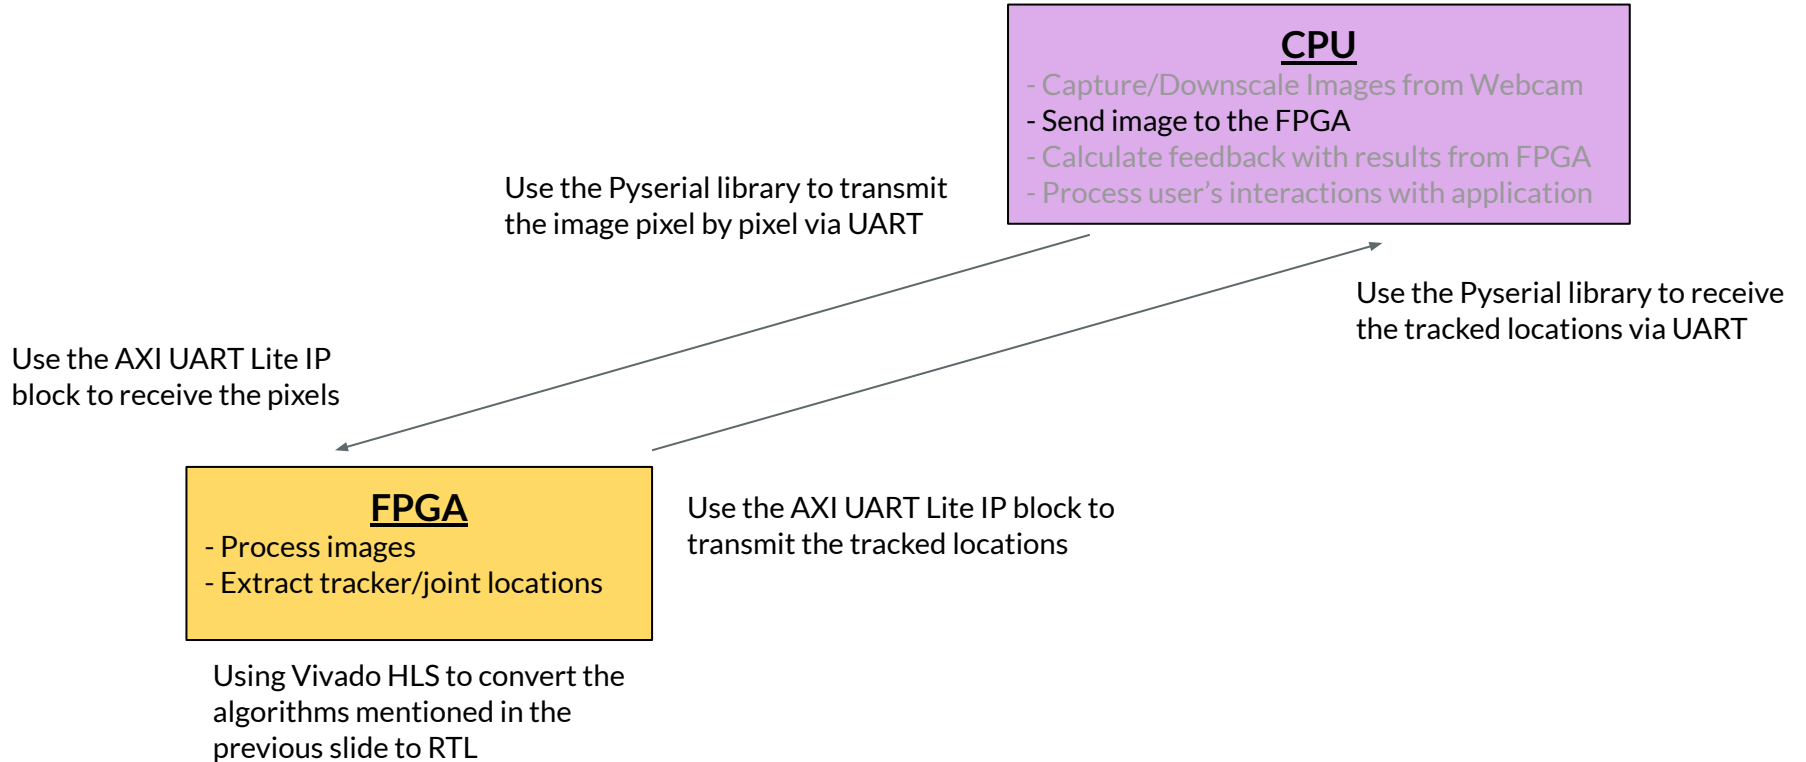

- Downscale + Convert (HSV)

Joint Tracking Algorithm:

- Binary Mask of pixels within HSV bounds
- Morphological Transform
 - Erosion
 - Dilation
- Max Area Rectangle
 - Max Area Histogram
- Output Center of Rectangle

Hardware

Posture Analysis

Joint Positions

CPU

- Capture/Downscale Images from Webcam
- Send Image to FPGA
- Calculate feedback with results from FPGA
- Process user's interactions with application

Feedback

Leg Raise:

- **Lines:** Shoulder - Hip - Knee - Ankle
- **Angles:** Hip & Knee
- **Checks:**
 - Angle of Knee = ~ 180 degrees
 - Angle at Hip = ~ 90 degrees
- **Feedback:**
 - "Knees are bent"
 - "Raise your Legs Higher"

Application/UI

- Application hosted in pygame using the GUI library
- Image Capture and streaming through OpenCV
 - Save images periodically for Pyserial Library to stream
- Mouse + Keyboard Interaction
- Workout data stored in SQLite

Feedback
from CPU

Application

- User interacts
- Customize workout plan
- Input biometrics

Leg Raise

Exercise 3/10 5:30
Remaining

Rep: 1/10

320 Cal

150-180 BPM

Raise Legs
Higher

Testing, Verification and Metrics

Requirement	Testing Strategy	Metrics
Downscaling & Conversion	Software testbench (analyze size and quality of resulting image)	100% size match
Detect trackers	Software testbench (analyze trackers over various images)	1 rep to be misclassified every set
Communication between computer and FPGA	Hardware testbench (analyze various packets of data sent)	Latency < 1s & 100% data accuracy
Posture Analysis	Software testbench (analyze various positions to extract info)	100% accuracy according to our designed models
UI (Workout Data + Feedback)	Human Eye (analyze the metrics are met from what is done)	Workout Data: ~tracker accuracy Feedback Delay < 1.5 secs

Risk Factors + Mitigation

- Unable to track the joints due to downscaled image -> more pixels to be sent -> increase I/O.
 - Plan to remove portions of the image based on workout
 - More defined trackers
- Unable to synthesize the C code to a high enough frequency -> results in lower baud rate -> influences overall latency.
 - Optimize as much as possible
 - Modify exercises to those that can handle slower feedback
- Having live stream, model video, and feedback at same time may be choppy
 - Separate live stream and feedback/workout app into separate applications

Work Distribution

- **Signal Processing**
 - Pre-Processing to downscale and convert the image (Python) -> **Albert**
 - Learn and implement algorithm to extract trackers and determine joints (Python) -> **Albert**
 - Implement posture analysis from the joint positions for feedback (Python) -> **Albert/Venkata**
 - Finetune thresholds to provide feedback regarding posture given joint locations -> **Albert/Venkata**
- **Hardware**
 - Learn how to communicate efficiently between the FPGA and CPU and vice-versa via UART -> **Venkata**
 - Learn and convert software algorithm to optimized synthesizable FPGA code (Vivado HLS) -> **Venkata/Albert**
- **Software**
 - Design the computer application interface (PyGame) -> **Vishal**
 - Integrate live video feed and capture image -> **Vishal**
 - Integrate recorded exercises and create timed workout with feedback -> **Vishal**

Updated Schedule

Falcon: the Gym Pro Assistant																
Tasks	Week 1 8/31	Week 2 9/7	Week 3 9/14	Week 4 9/21	Week 5 9/28	Week 6 10/5	Week 7 10/12	Week 8 10/19	Week 9 10/26	Week 10 11/2	Week 11 11/9	Week 12 11/16	Week 13 11/23	Week 14 11/30	Week 15 12/7	Week 16 12/14
Milestones	Project Planning			Design Implementation					Integration and Verification				Project Report and Presentation			
Signal Processing																
Pre-processing image to downscale image																
Learn algorithm to extract joints																
Implementing algorithm to extract joints																
Implementing Posture Analysis																
Determine thresholds for posture analysis																
Hardware																
Learn Vivado/HLS																
Convert joints algorithm to FPGA code																
Optimize algorithm for better performance																
Learn communication protocol (UART)																
Implement communication protocol logic																
Software + UI																
Design the UI Model																
Setup PyGame (Basic Framework)																
Implement Camera Display + Capture Image																
Integrate Recorded Model Exercise																
Customize User Biodata and Create timed workout																
Keep Track of Data and Output Feedback																
Refining Implementation																
Extraneous Setup																
Create the Trackers																
Integration + Final Verification																
Verification of individual parts																
Integrate + Verify I/O with Image Processing																
Integrate + Verify processing output with UI																
Refining App and Integration																
Proposal/Report/Presentation																
Project Ideas																
Abstract																
Project Proposal																
Design Presentation																
Design Report																
Demo in Lab																
In Lab Demo																
Final Presentation																
Final Report
