# Matteo Longo

Team D1

What did you personally accomplish this week on the project?

- Set wiring design for load cell to HX711, and HX711 to Raspberry pi
- Ordered final parts, new batteries are much lighter
- Went on wild goose chase to find proper jumper cables and other basic materials
- Soldered wires for load cell
- Researched capabilities for multiple ultrasonic sensors at once, decided one was best for now

Schedule:

- Slightly behind, but easy enough to catch up

What deliverables do you hope to complete in the next week?

- Finish wiring devices as they should be on the robot's frame
- Test sensors
