

Team A4 - BeatLock

Zoe Rudnick, Brooke Rodriguez, Jada Fink

Use Case and Application

Current door unlocking systems have limited security and are boring

Use Case:

- Security
- Fun and engaging
- Durable
- Relatively quick entry time
- Unique key for each user
- Reliability and repeatability

Quantitative Design Requirements

Two-factor authentication via phone app	Communication between the phone, the mat, and the lock via bluetooth
Minimum of 10 dance steps per dance	Correct dance opens door >99% of the time
Ability to choose between >1 song	Speakers should achieve specs 100Hz - 15KHz and ~70dB
Backup PIN	Materials and design must withstand 300 lbs
Differentiate between standing and stepping	Function as a traditional doormat

Security

Hardware/Software

Manufacturing

Solution Approach

Software

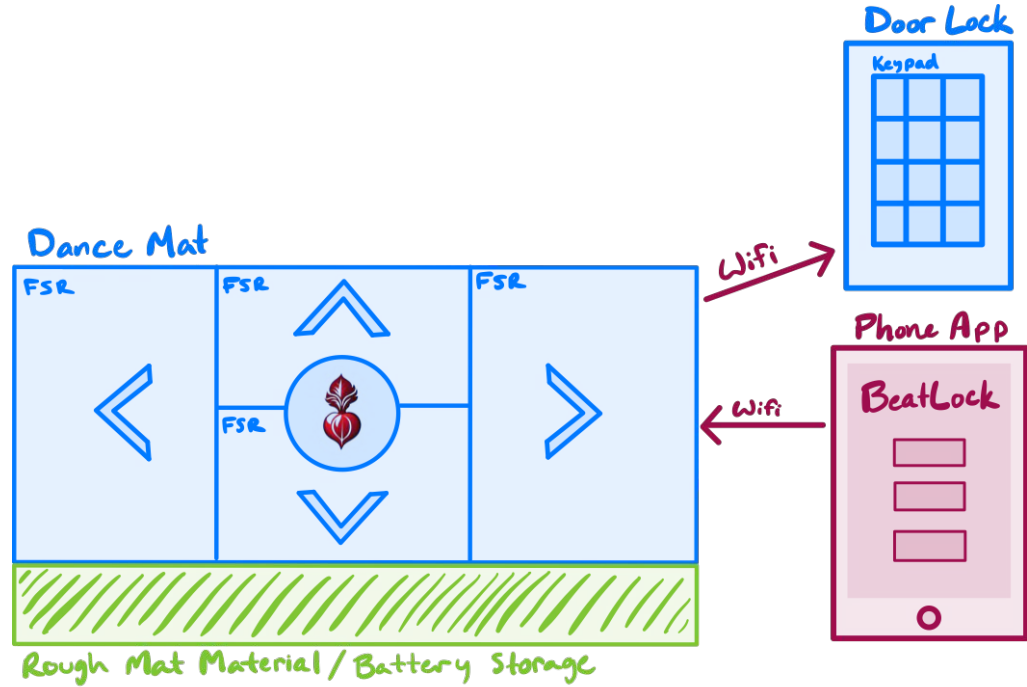

- Arduino IDE for ESP32
- React Native/Expo for App

Hardware

- Custom PCB
- Microcontrollers for Mat and Lock
- Force-Sensing Resistors
- Surface Transducer Speaker
- Capacitive Touch Keypad

Manufacturing

- 3D Printing
- Laser Cutting

Ethical Considerations

— — —

Safety and Public Health

- Increased home security
- Physiological and psychological benefits

Social

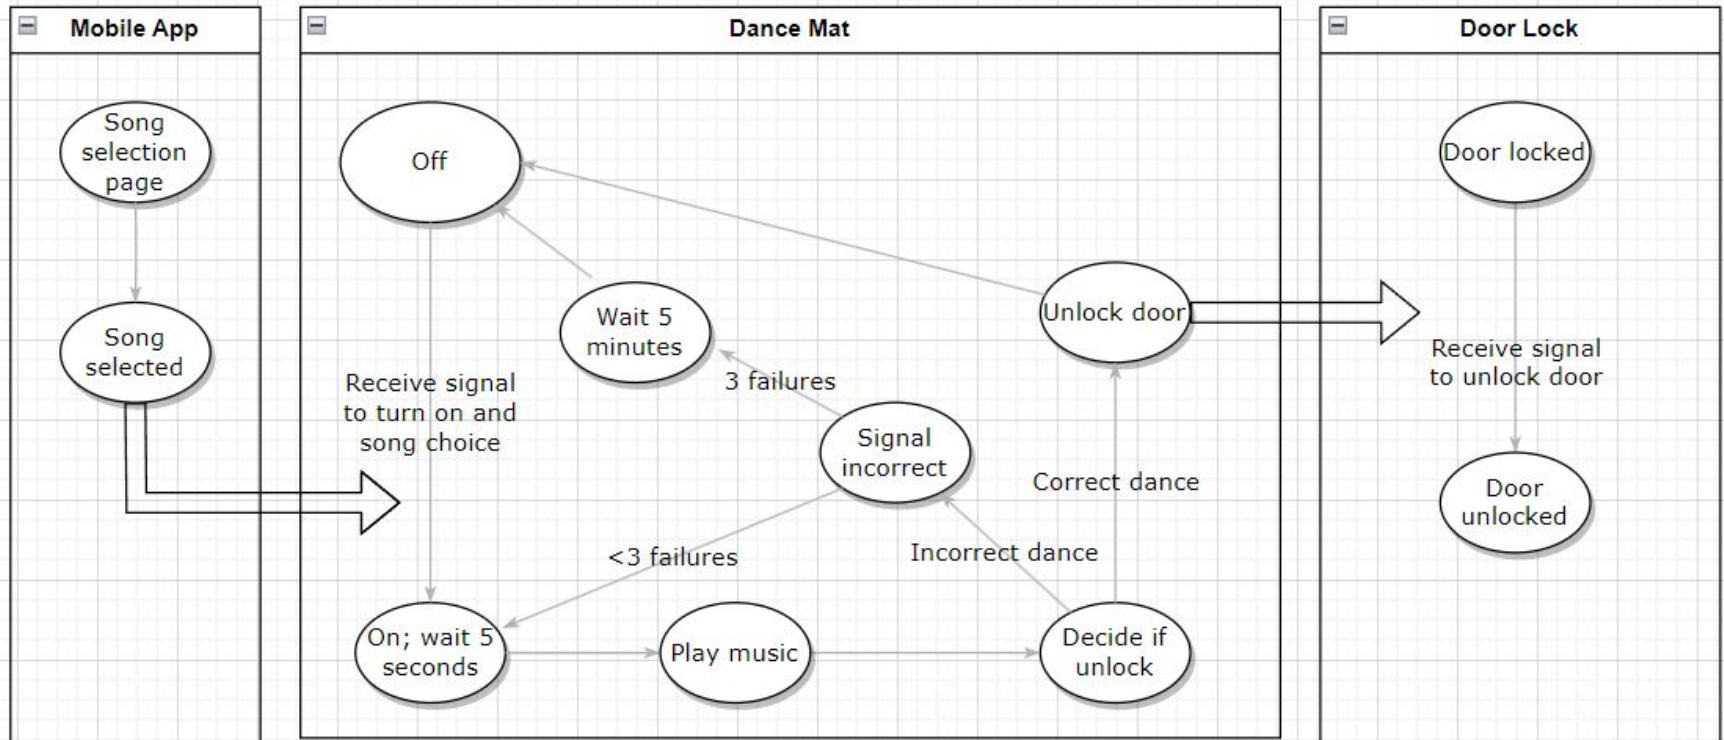

- Product isn't for everyone
- Fun and exciting for young adults

Economic

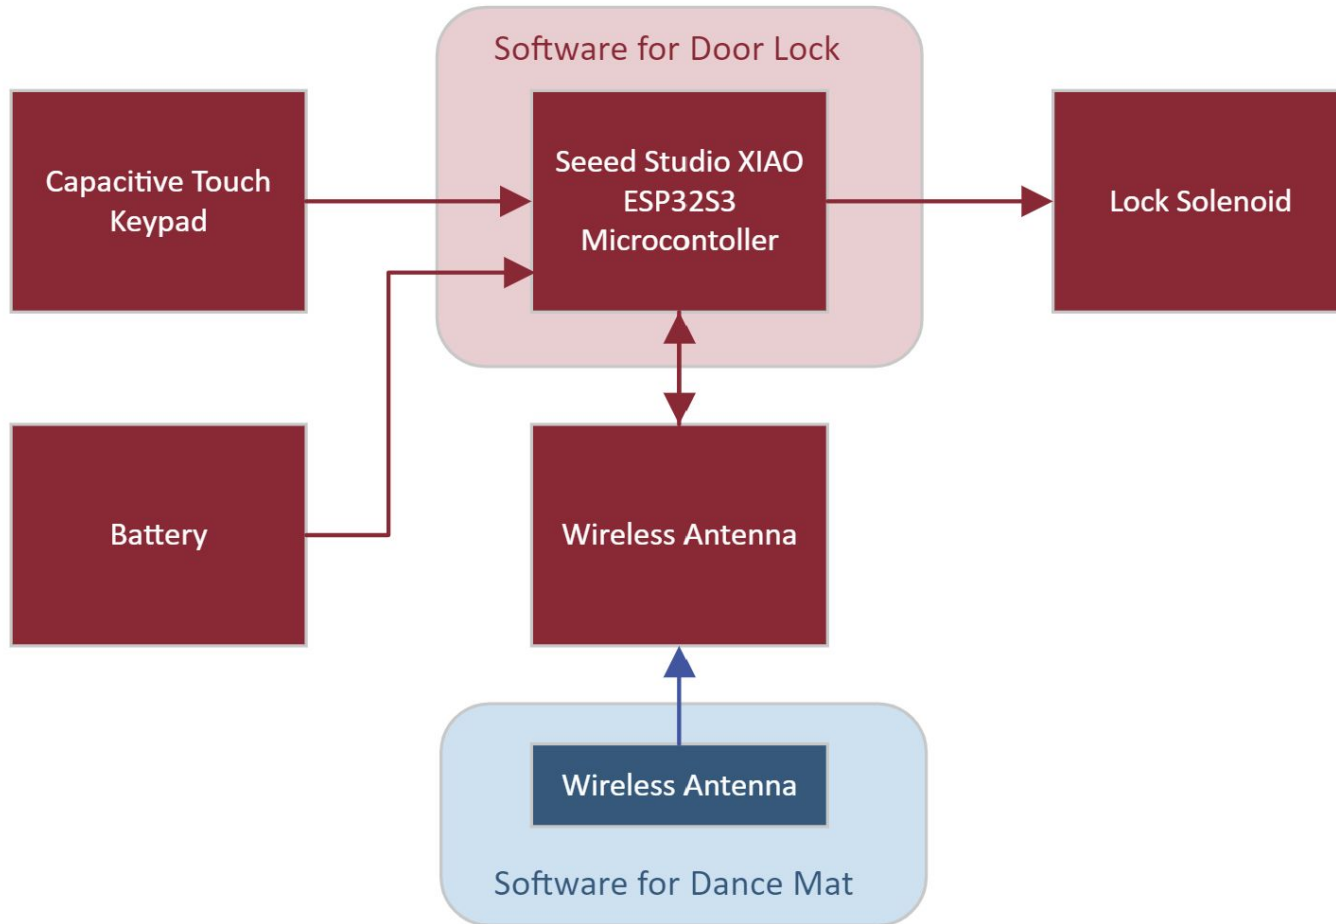

- Relatively inexpensive (<\$150 unit cost target)
- Potential compatibility with existing smart/open source locks

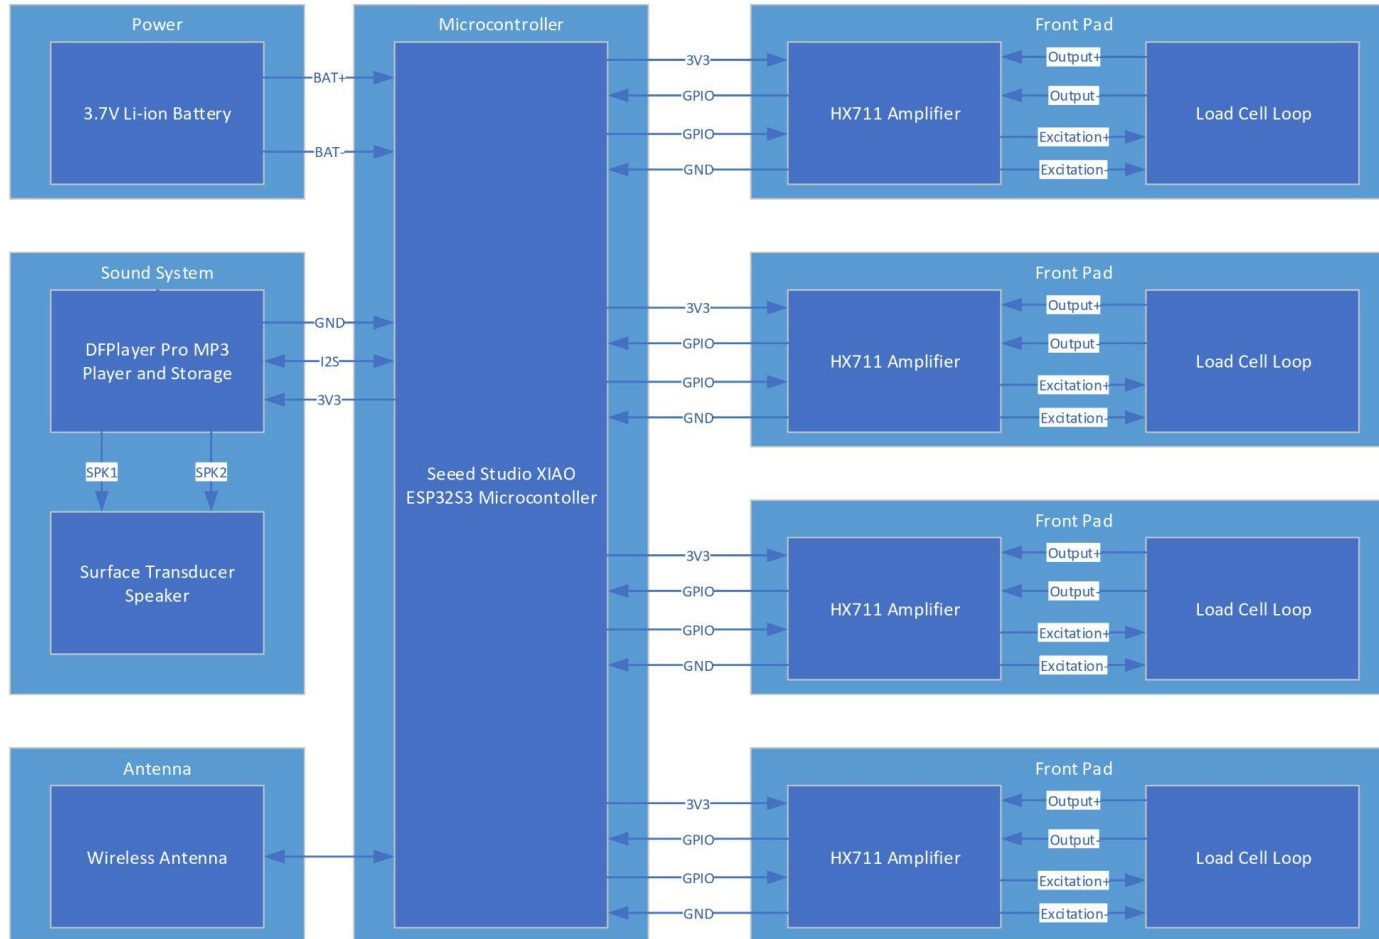

State Diagram

Door Lock Block Diagram

Dance Pad Block Diagram

Implementation Plan

Buying

- Microcontrollers, speakers, keypad, FSRs, lock solenoid

Implementation Plan

Assembling

- Mat, lock, weight sensors

Designing/developing

- PCB, software, app, electronics housing and mat exterior

Testing, Verification, and Metrics

— — —

Part Testing

- FSR tuning using a basic step pad prototype
- Speaker testing using a decibel reader and testing different songs for frequency
- Verify functionality of other electronic components

Functional testing

- Use one test dance to verify mat and lock functions

Usability testing

- Get feedback from others (>20 people) about user experience

Reliability testing

- Use stress testing and long-duration testing to find potential issues (>200 test runs)

Project Management
